OBJECTIVE

A Motivated Multi Cloud and DevOps Graduate with hands-on experience in AWS, Git, Jenkins, Docker, Kubernetes, Terraform, Ansible, and monitoring tools like Prometheus and Grafana. Seeking to leverage my skills in automating processes, optimizing cloud infrastructure, and enhancing deployments.

EDUCATION

Master of Computer Application w/s Generative AI (MCA) 2027 SRM University, Chennai	Pursuing
Bachelor of Computer Application , 2024 Sanmuga Arts & Science College, Thiruvannamalai.	75%
HSC 2021 Government Higher Secondary School, Sengunam.	70%
SSLC 2019 Government Higher Secondary School, Sengunam	56%

SKILLS

AWS SERVICES

EC2, S3, IAM, WAF, VPC, ELB, ASG, R53, EBS, CloudFront, CW, CloudTrail, ACM, RDS, KMS, CloudFormation, ECR, EKS.

AZURE SERVICES

VM, Blob Storage, Azure SQL, Azure AD, VNET, Azure RM, Azure VM Scale Set, Azure LB, Azure Monitor, and AKS.

AUTOMATION TOOLS

GIT,Jenkins,Terraform,Ansible.

MONITORING TOOL

Cloud watch,Prometheus&Grafana,Splunk.

CONTAINER AND ORCHESTRATION TOOL

Docker,Kubernetes.

PROJECTS

Disaster Recovery – Multi-Site Active-Active Architecture

Technologies Used: AWS S3, Route 53, CloudFront, RDS, ELB, IAM

Designed a multi-site active-active disaster recovery (DR) strategy using AWS Route 53 latency-based routing and CloudFront origin failover to ensure seamless traffic redirection during regional failures.

Implemented S3 Cross-Region Replication (CRR) and RDS cross-region read replicas to enhance data availability and durability.

Configured Elastic Load Balancers (ELB) across multiple regions to enable fault-tolerant traffic distribution and high availability. Automated DR processes using CloudFormation templates and enforced security best practices with IAM policies for controlled failover operations

Website Deployment for using CI/CD Pipeline

Technologies Used: Jenkins, GitHub, Maven, SonarQube, Docker

Developed an end-to-end automated CI/CD pipeline using Jenkins and GitHub webhooks, enabling seamless continuous integration and deployment for static websites.

Integrated Maven for build automation, ensuring efficient packaging and dependency management, while leveraging SonarQube for comprehensive code quality analysis. Containerized deployments by creating a custom HTTPD Docker image, ensuring consistency and scalability across different environments.

Optimized the pipeline for faster, error-free deployments, enhancing code quality, accelerating delivery, and ensuring production-ready containerized applications.
